

This is not  
about a LCV.

This is about a driver and its fleet manager.

# people. fleet. impact.

Optimise your fleet with behavioural change that makes an impact

Would you like to have a firmer grip on your international fleet performance? With our state-of-the-art technology, you can obtain a real-time, clear overview of all your user data. We translate these data insights into concrete, practical advice that produces visible results and leads to desirable behavioural changes that greatly enhance your fleet's efficiency, durability, and safety as well as creating a structural impact within your organisation.

## Increased focus on sustainability

We will increase the sustainability of your fleet in several ways. With our technology, you can work towards lower fuel consumption, fewer unnecessary kilometres, fewer emissions, and increased awareness among your employees regarding their driving behaviour.

Driving more economically increases the lifespan of your vehicles. With accurate and automated reporting of your emission levels, you will immediately comply with the latest CO<sub>2</sub> regulations. Our data insights also show you which EVs are most compatible with your drivers' driving behaviour so you can continue to electrify your fleet and prepare for a sustainable future!

## Improving efficiency through anticipation

By linking data to your drivers' driving behaviour, you can also focus on KPIs geared towards optimising your fleet's effectiveness. More efficient driving practices also reduces wear and tear on your vehicles, which in turn leads to less servicing and lower maintenance costs. With vehicle tracking, you can link transport routes to real-time data such as location and traffic services, ensuring efficient deliveries and significant savings on fuel consumption. More conscious driving behaviour increases your fleet's efficiency, minimises costs, and ensures that the investment made in our fleet telematic solutions will quickly pay for itself!

“ With the advanced, reliable telematics solutions from our partner Moove, we now have real-time insight into our fleet performance and can optimise our collaboration with our suppliers. ”

**Dennis van der Schaaf**  
Associate Director of Logistics at HelloFresh

## Safety first

Drivers are under increasing pressure to complete their routes as quickly as possible. This can lead to dangerous situations and even accidents, with irreversible damage to your business image as a result. Registering your vehicles' speed, acceleration, braking time and actual route followed will help you gain full insight into your employees' driving behaviour.

You can point out dangerous driving behaviour and the potential consequences that behaviour entails to your drivers when necessary. Keeping a driving behaviour score makes them even more conscious of their behaviour on the road, increasing the safety of both your employees and other road users.

## Security and privacy with the highest standards

We truly understand that working with telematics is a privacy-sensitive situation. That is why we comply with the highest data privacy and IT security standards. Our process is [constantly monitored](#) for quality of service. Our ISO 27701 certification proves that our management systems correctly deal with personal data processing so we can protect the privacy of your employees as effectively as possible. Our data experts guide you through developing a privacy and security programme tailored to your organisation. By taking the first step, you are creating the necessary support and engagement for a successful adoption process.

## About Moove

Moove Connected is your global partner in fleet telematics. We work with our customers on a people-first basis. Technology plays a vital role in our field, but we always put people first when it comes to making a real impact for our customers. Our ambitious Dedicated Customer Success Team is committed to providing the best solutions for our clients. We do so with cutting-edge technology from GeoTab, the global market leader in telematics. Their innovative solutions offer comprehensive insight into the most important statistics concerning your fleet. This technology forms the basis for making the right decisions, from short-term efficiency improvements to optimising desirable driving behaviour for a sustainable international fleet in the long term.
